

Cambridge FUSIC Heart and Lung Ultrasound: A Comprehensive Exploration 17th (online) – 18th (practical) March 2025

This two-day immersive program is meticulously crafted by our faculty comprising experts with core FUSIC, BSE, and ESC qualifications.

Day one is a comprehensive exploration of theoretical foundations delivered through online lectures. Topics include physics and machine/image optimization, sono anatomy, modalities of ultrasound (2-D and M-mode), basic measurements, haemodynamic assessment, clinical scenarios encountered in intensive care, echo report writing, and a detailed walkthrough of the FUSIC process, guiding trainees toward obtaining full core FUSIC qualifications.

On the second day, dive into practical hands-on experience with small-group ultrasound scanning sessions. With a focus on reinforcing theoretical concepts, delegates will engage in supervised practical sessions led by experienced faculty. Each workstation will accommodate limited groups of four delegates or fewer, ensuring personalized guidance and optimal learning experiences.

Venue Cambridge Belfry, Back Lane, Great Cambourne, Cambourne, Cambridge CB23 6BW
Cost - 350 pounds
