

## Standard Medication Concentrations for Continuous Infusions in Adult Critical Care

The Intensive Care Society supports the adoption of standard concentrations and endorses the recommendations of a multi-professional group who have published a list of concentrations with wide acceptance by critical care for this purpose [1,2,3].

Standardising concentrations represents a significant step towards improving both patient safety and efficient use of resources within critical care. It also facilitates the production of a national injectables guide to provide the end user with the information necessary to safely administer such medications [4].

The adoption of these is recommended, not mandated. It is anticipated that pharmaceutical manufacturers will begin to prepare ready to use and ready to administer products based on this list.

| Medication                   | Concentration    | Example Infusion<br>Composition | Central or<br>Peripheral |
|------------------------------|------------------|---------------------------------|--------------------------|
| Morphine                     | 1mg/mL           | 50mg in 50mL                    | C / P                    |
|                              | 2mg/mL           | 100mg in 50mL                   | C / P                    |
| Fentanyl                     | 50micrograms/mL  | 2.5mg in 50mL                   | C / P                    |
| Alfentanil                   | 500micrograms/mL | 25mg in 50mL                    | C / P                    |
| Remifentanil                 | 50micrograms/mL  | 2mg in 40mL                     | C / P                    |
| Remirentanii                 | 100micrograms/mL | 5mg in 50mL                     | C / P                    |
| Midazolam                    | 1mg/mL           | 50mg in 50mL                    | C / P                    |
| Midazolam                    | 2mg/mL           | 100mg in 50mL                   | C / P                    |
| Clonidine                    | 15micrograms/mL  | 750micrograms in 50mL           | C / P                    |
| D 1                          | 4micrograms/mL   | 200micrograms in 50mL           | C / P                    |
| Dexmedetomidine              | 8micrograms/mL   | 400micrograms in 50mL           | C / P                    |
|                              | 80micrograms/mL  | 4mg in 50mL<br>8mg in 100mL     | C / P<br>C / P           |
| Adrenaline                   | 160micrograms/mL | 8mg in 50mL<br>16mg in 100mL    | C<br>C                   |
|                              | 320micrograms/mL | 16mg in 50mL<br>32mg in 100mL   | C                        |
| Noradrenaline                | 16micrograms/mL  | 4mg in 250mL                    | C / P                    |
